

• Powered by AMD GPUs • Fireworks AI

AI Launchpad

Turn one idea into a full startup kit in seconds.

AMD Developer Hackathon: ACT II • Unicorn Track (Open Innovation)

Jeyanth Balaji K

The blank-page problem

Starting a business means hours of work before you can show anyone your idea.

1

Naming

Brainstorming a name, tagline, and value proposition that actually lands.

2

Copywriting

Writing a landing page — headline, features, and a call to action.

3

Branding

Choosing colors, a logo direction, and a consistent visual identity.

The result: **great ideas stall at the starting line.**

One sentence in. A full kit out.

Type one line — **“an app that helps students find part-time jobs”** — and a crew of AI agents delivers a complete starter kit in ~30 seconds.

Name & tagline

A punchy identity + value proposition

Landing page

Hero, three features, and a call to action

Brand look

A 5-color palette, logo concept, and font

Social captions

Three launch posts, ready to publish

You watch it appear live — **the “wow” moment.**

A crew of four AI agents

The Strategist runs first — then the other three work in parallel for speed.

1

Strategist

name · tagline · value prop

2

Copywriter

landing-page copy

3

Brand Designer

palette · logo · font

4

Social Manager

3 launch captions

Under the hood: each agent is a single focused LLM call on **Fireworks AI, running on AMD GPUs**, forced to return JSON so the UI renders reliably. The orchestrator is **resilient** — if one agent fails, the others still return, so a live demo never breaks.

Watch a brand appear live

The four agents light up one by one — then the full startup kit reveals, section by section.

App demo screenshot

(live generated kit — added after the first real run)

Built on AMD compute

Every agent runs on AMD GPUs — and the whole app is containerized for AMD Developer Cloud.

Frontend

React + Vite + Tailwind CSS

Backend

Python + FastAPI
orchestration

AI compute

Fireworks AI on AMD GPUs

Packaging

Docker → AMD Developer
Cloud

Fully containerized · publicly reproducible · **runs the same locally and on AMD Developer Cloud.**

Why AI Launchpad stands out

Live agent reveal

Judges watch the crew work, one by one.

Full brand kit

Name, page, palette, logo mark, captions.

Download kit

Exports a standalone, brand-styled landing page.

Works for any idea

Coffee, fitness, tutoring — unique every time.

Resilient by design

One failed agent never breaks the demo.

Fully containerized

Docker, ready for AMD Developer Cloud.

The fastest way from idea to launch.

For every founder, student, and creator.
